# AI Policy

At Kaabil, we recognize both risks and potentials of AI, we proforce for education—and we commit to harnessing it responsibly. Our AI Policy aligns with India's DPDP principles, and global best practices. It ensures every AI feature we build is safe, fair, and transparent, empowering learners and educators alike.

## Legal & Ethical Compliance

- All AI systems adhere to India's DPDP Act requirements (consent, purpose-limitation, data protection), and are designed with an eye toward upcoming trust and policy standards.
- Every new AI feature passed a lightweight "AI Compliance Checklist" before launch, ensuring legal, privacy, and ethical criteria are met.

## Purpose-Limited Use

- AI capabilities are restricted solely to learning tasks—question generation, hint delivery, progress analysis—never repurposed for non-educational or surveillance uses.
- We enforce "capability gates" at the code level to prevent unintended access to AI endpoints beyond their approved scope.

## Fairness & Non-Discrimination

- Automated metrics run daily. Alerts trigger whenever bias thresholds are exceeded.
- Our datasets and model training processes actively incorporate unbiased data sets to prevent unfair outcomes.

## Transparency & Explainability

- Every AI recommendation or score is accompanied by a rationale.
- We maintain teacher-friendly docs on how our AI works, including model versions, key parameters, and evaluation results.

## Data Privacy & Security

- AI training and inference use only data for which users have given explicit consent.
- All data are encrypted.
- For highly sensitive flows—such as personalized feedback—we employ on-device inference to minimize data exposure.

## Human Oversight & Accountability

- AI outputs are always advisory. Teachers can accept, modify, or reject suggestions or any question generated before they reach learners.
- A panel of educators, technical, and legal experts review model updates, incidents, and policy compliance.
- Prior to release, every AI component undergoes a formal “Risk & Impact Assessment” that scores potential harms (e.g., misgrading).

## Reporting & Review

If you identify any AI behavior that concerns you, please report it confidentially to [lakshita@kaabil.me](mailto:lakshita@kaabil.me). We will investigate all reports and publish a summary of findings and necessary measures for improvements will be provided.

## Policy Updates & Review

Kaabil's AI Policy is a living document.

We review and update it as we update our model as needed and when regulations evolve.

Significant changes will be communicated 10 days before taking effect.

Thank you for partnering with us as we build the AI that is safe, responsible, and transparent.
